# Introduction to Harvard's FAS Research Computing Cluster

- Compute: 100,000 compute nodes, 8-64 cores/node, 12Gb to 512Gb memory/node, 2,500,000 NVIDIA GPU cores
- Software: CentOS 7 operating system, Slurm job manager, Singularity, 1000+ scientific tools and programs
- Storage: 100 GB (Home dir), 4TB+ (Lab storage), 70Gb/node (Local scratch), 2.4PB (Global scratch), 3PB (Persistent Research data)
- #144 in TOP500 Supercomputers in world

**FASRC CANNON**  
HARVARD'S LARGEST CLUSTER

-  100,000 CPU CORES  
3,000+ NODES
-  500 TB RAM  
40PB STORAGE  
2.5M CUDA CORES
-  29 MILLION JOBS/YR  
300 MILLION CPU HR/YR

 3 DATA CENTERS @ 10K+ FT<sup>2</sup>  
BOSTON, CAMBRIDGE, & LEED PLATINUM  
GREEN DATA CENTER IN HOLYOKE, MA

 500+ LAB GROUPS  
OVER 5500 USERS

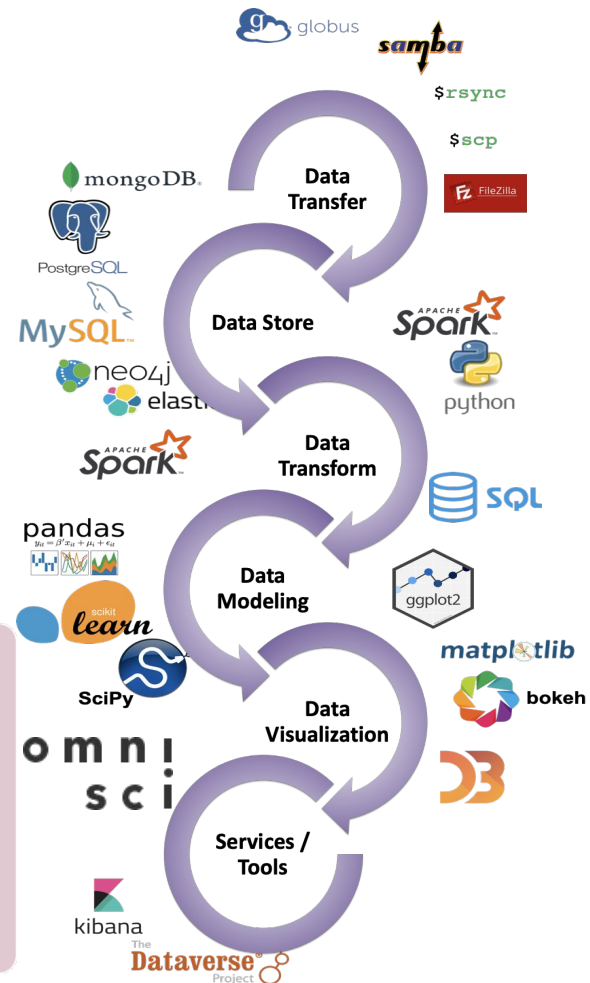

CANNON: THE FASRC CLUSTER IS NAMED IN HONOR OF ANNIE JUMP CANNON, A PIONEER IN ASTRONOMY 

# FASRC Services

## Software:

- Operating System CentOS 7
- 1,000+ scientific tools and programs
  - <https://portal.rc.fas.harvard.edu/apps/modules>
- C, C++, Fortran and Intel compilers available
- Languages like Python, R and Julia etc. can be used
- Databases like MySQL, Postgres and MongoDB

# Data Science Virtual Desktop Apps

The screenshot displays the FAS RC (FAS Research Computing) interface. The top navigation bar includes the FAS RC logo, the text "FAS Research Computing Harvard University Faculty of Arts & Sciences", and navigation links for "Files", "Jobs", "Clusters", "Interactive Apps", and "My Interactive Sessions". On the right side of the navigation bar, there are links for "Develop", "Help", "Logged In as dkakkar", and "Log Out".

The main content area shows a breadcrumb "Home / My Interactive Sessions" and a message "You have no active sessions". A sidebar on the left lists various interactive apps under the heading "Interactive Apps". A dropdown menu is open, showing a detailed list of these apps, categorized into Desktops, FAS CGA, FAS Informatics, GUIs, and Servers.

**Interactive Apps List:**

- Desktops
  - FAS-RC Remote Visualization
  - FAS-RC Remote Desktop
  - Containerized FAS-RC Remote Desktop
- FAS CGA
  - OmniSci
  - Postgresql db
- FAS Informatics
  - Jupyter Lab (scipy-notebook)
  - RStudio Server (Bioconductor + tidyverse)
- GUIs
  - Desktop Environment for Totalview
  - Matlab
  - Stata
- Servers
  - JBrowse
  - Jupyter Lab
  - Jupyter notebook
  - Rstudio Server
  - TensorBoard

# GIS Databases for Big Data

- **PostgreSQL:** Powerful, open source object-relational database system
- **PostGIS:** Provides spatial objects for the PostgreSQL database, allowing storage and query of information about location and mapping
- **OmniSci:**
  - Designed to overcome the scalability and performance limitations of legacy analytics tools
  - Super fast queries/analytics (including machine learning) of unindexed data (open source)
  - Super fast interactive rendering (free for educational use) of millions or billions of features, on-the-fly on a map
  - Leverages the massively parallel processing of GPUs alongside traditional CPU compute

GUIs

- Desktop Environment for Totalview
- Matlab
- Stata

Servers

- JBrowse
- Jupyter Lab
- Jupyter notebook

## OmniSci

This app will launch **OmniSci** on a compute node on the **FAS-RC** cluster:

**Partition**

**Memory Allocation in GB**

**Number of cores**

Number of Cpus to allocate

**Number of GPUs**

Number of GPUs to allocate. Available only on GPU enabled partitions

**Allocated Time (expressed in MM , or HH:MM:SS , or DD-HH:MM).**

**location to map omnisci-storage**

This is the folder location that will be mapped to omnisci-storage. It should contain the subfolders {Datasets,omnisci-storage} (default: /scratch/\$USER/\$SLURM\_JOB\_ID)

**script to be executed before starting OmniSci**

Totalview

- Matlab
- Stata

Servers

- JBrowse
- Jupyter Lab
- Jupyter notebook
- Rstudio Server
- TensorBoard

**Interactive Apps [Sandbox]**

- FAS CGA
- OmniSci**
- Postgresql db

**Allocated Time (expressed in MM , or HH:MM:SS , or DD-HH:MM).**

**location to map omnisci-storage**

This is the folder location that will be mapped to omnisci-storage. It should contain the subfolders {Datasets,omnisci-storage} (default: /scratch/\$USER/\$SLURM\_JOB\_ID)

**script to be executed before starting OmniSci**

This will be executed before starting the container outside the container

I would like to receive an email when the session starts

**email address for status notification**

**Reservation**

**Slurm Account**

If you are not in multiple labs please leave this blank.

**Launch**

All OmniSci session data is generated and stored under the user's home directory in the corresponding data root directory.

# OmniSci on FASRC

# Review of the scripts required to run OmniSci on the slurm cluster

Github Repo:

[https://github.com/cga-harvard/GIS\\_Apps\\_on\\_HPC/tree/master/dev/OmniSci](https://github.com/cga-harvard/GIS_Apps_on_HPC/tree/master/dev/OmniSci)

The various script in the repo are run to achieve the following processes:

- Develop a User Interface to request the job parameter(partition, memory, CPUs, GPUs etc)
- Run a slurm job with the parameters specified by the user on Launch
- Install Omnisci using Singularity (Finding port, setting data directory, setting passwords etc.)
- Pass connection parameter to the user (if successful) else display the error

# How other slurm clusters can do the same, and get involved in the open source project

The screenshot shows a GitHub repository page for 'cga-harvard / GIS\_Apps\_on\_HPC'. The repository is described as a 'Repository for FASRC projects'. It has 65 commits, 1 branch, 0 packages, 0 releases, and 1 contributor. The repository contains several files and folders: 'dev', 'images', 'scripts', '.DS\_Store', and 'README.md'. The 'README.md' file is selected, showing an 'Introduction' section. The introduction text reads: 'This is repository for all GIS apps installed on Harvard's High Performance Cluster. Please refer to wiki page of this repo for information on individual topics.'
